Android Studio

Install Android Studio at Android Studio

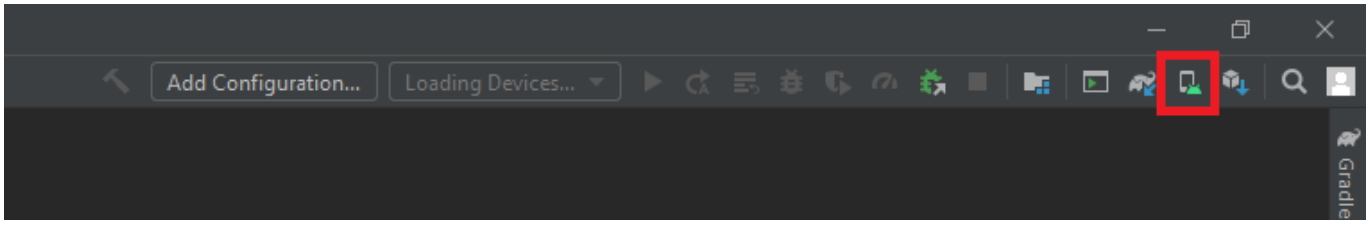

The 'Android Studio Setup Wizard' should install the latest Android SDK, Android SDK Command-line Tools, and Android SDK Build-Tools which are required for flutter.

If you need to update the Android SDK or any Android SDK tools you may do so at `Preferences > Appearance & Behaviour > System Settings > Android SDK`

Android Emulator

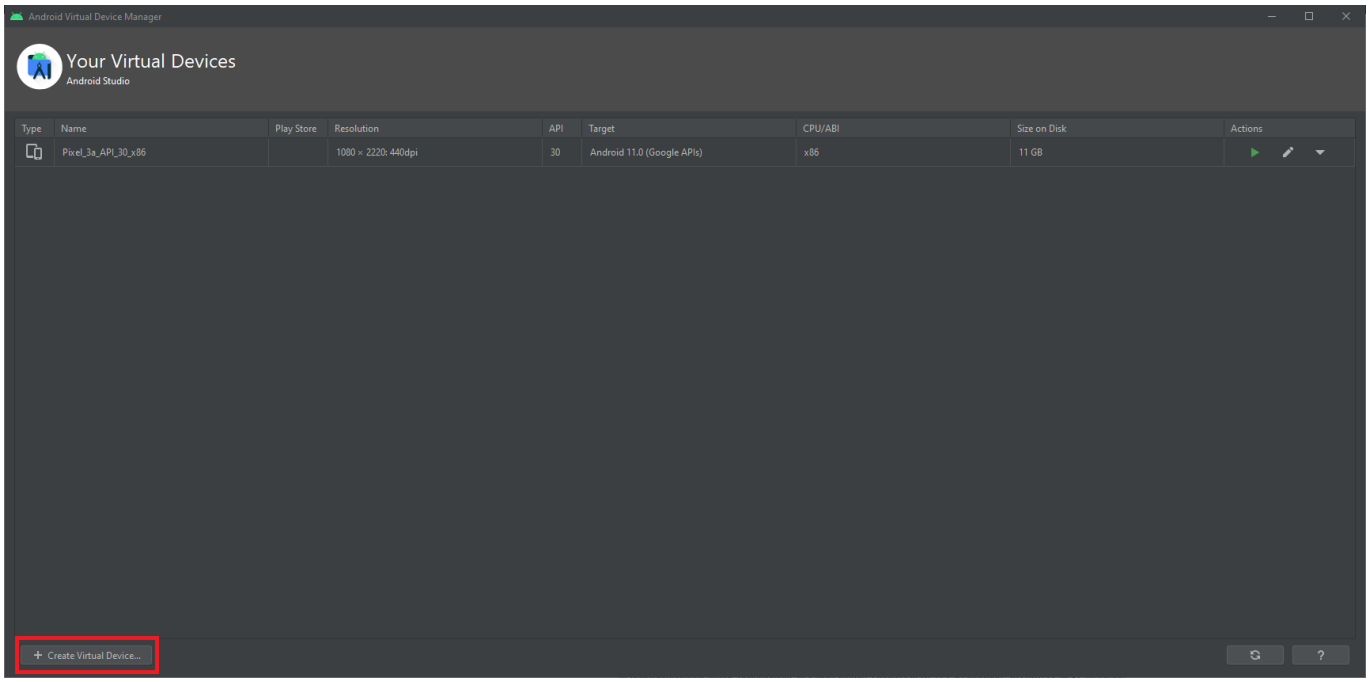

- Launch Android Studio, click the AVD Manager icon, and select Create Virtual Device...

- In older versions of Android Studio, you should instead launch Android Studio > Tools > Android

> AVD Manager and select Create Virtual Device.... (The Android submenu is only present when inside an Android project.)

- If you do not have a project open, you can choose Configure > AVD Manager and select Create Virtual Device...

- Follow the configuration and select your configurations for the virtual device
  - Under Emulated Performance, you should select Hardware - GLES 2.0 to enable hardware acceleration.
