

Office 365 check installed product key

- Run Command Prompt as administrator
- Run this command

```
c:\>cscript "c:\Program Files (x86)\Microsoft Office\Office16\OSPP.vbs"  
/dstatus  
<code>
```

* Check the last 5 characters of the installed product key
* Remove the product key with this command. Do NOT leave space between "unpkey:" and the product key "XXXXX"

```
<code>  
cscript "C:\Program Files (x86)\Microsoft Office\Office16\OSPP.VBS"  
/unpkey:XXXXX
```

- Then reinstall the product key

```
cscript "C:\Program Files (x86)\Microsoft Office\Office16\OSPP.VBS"  
/inpkey:XXXXX-XXXXX-XXXXX-XXXXX-XXXXX
```

- After input the new product key, better to run the dstatus again to check it.

```
<code> c:\>cscript "c:\Program Files (x86)\Microsoft Office\Office16\OSPP.vbs" /dstatus <code>
```

- Then you could activate the Office software as usual by opening Word or Excel, etc.
