## **Setting Up Flutter Develop Machine**

## **Setting up**

First Set up the following tools

Visual Studio Code setup

Git

**Flutter** 

Android studio

xcode

## **Building the app**

- Get the correct branch from SmartGit (you may create a new branch from here)
- Download the corresponding Google Play upload key from Android App Keystore
- Place the .jks in a folder such as '~/keystore/'
- Create a file in project folder/android/ called key.properties and write in the file

storePassword=<password>
keyPassword=<password>
keyAlias=key
storeFile=<file path to .jsk file>

• In Visual Studio Code, choose the device you will run the code and start debugging by pressing Run > Start Debugging or pressing F5

If you fail to build to ios try right clicking on the ios folder and choose Open in Xcode Make sure that the account is correct to sign the project, and the correct device is selected on the top to build the code.

## **Possible Problems and Issues**
